

interlock clip

On Site Safety - Protecting You[®] introduces the Interlock Clip.

The Interlock Clip is ideal for gripping your gloves, ear muffs, helmets, towels and just about anything else. The Interlock Clip can guard your gloves from getting lost.

The Interlock Clip features two gripping clips, joined by a holding cord.

The jaw teeth on each clip provides for a super grip.

The Interlock Clip is designed to separate and break from each other in the event of the item being held getting caught in machinery.

The holding lugs will break in conjunction with the holding cord when a high force is applied on the Interlock Clip.

The Interlock Clip is available in a variety of colours.
